John - Thank you. I'm not sure how accessible John Hines will be, but I will be in this week. My direct line is (717) 772-5633.

We have been working on the re-drafted language and making progress. Section 8 (Agriculture) is completed. We're still working on revisions to Sections 5 & 14, but are getting closer.

Andy Z

Subject: Final PA WIP Implementation Rates - for completion of WIP Addendum

John/Andy -

We are in the home stretch. Thank you again for all of your assistance on the WIP refinements to close the gaps. I am sending the attached Table summarizing the percent implementation levels which are assumed in the final WIP for PA (built off of WIP8) and which will be the basis for the TMDL allocations and ongoing WIP oversight. The table shows the assumed divisions for CAFO and AFO loads and also for the first time adds a BMP line for the PA Diesel Idling Deposition Reduction as you have requested.

Jeff Sweeney is the contact on this if you have any questions.

We ask that you complete the WIP Addendum as soon as possible so that the narrative strategies track the implementation rates and support the reasonable assurance section of the PA WIP and the final TMDL. Folks are cranking the final language of the TMDL Report and we need this information early in the week to ensure it is properly referenced and part of the record.

I will be contacting you once more early in the week to make certain you understand the approach we will be taking to final allocations and backstopping/oversight in the TMDL. Happy holidays and wish you all the best!

Jon
